

22. (Amended) A record and playback system for recording an audio file for later playback comprising:

- A2  
Sub B4
- a. means for establishing a telephony connection with a telephony device;
  - b. means for recording coupled to the means for establishing a telephony connection for recording an audio communication transmitted over the telephony connection thereby establishing a recorded audio file; and
  - c. means for storing coupled to the means for recording for storing the recorded audio file at an independently accessible address, such that when the address is accessed by a computer system, the recorded audio file is transmitted to the computer system for playback.

30. (Amended) A record and playback system for recording an audio file for later playback comprising:

- Sub B5  
A3
- a. an interface circuit configured to establish a telephony connection with a telephony device;
  - b. a call recording system coupled to the interface circuit to record an audio communication transmitted over the telephony connection thereby establishing a recorded audio file; and
  - c. a storage system coupled to the call recording system to store the recorded audio file at an independently accessible address within the storage system, such that when the address is accessed by a computer system, the recorded audio file is transmitted to the computer system for playback.

37. (Amended) A network of devices for recording and playback of an audio file comprising:

- A4  
Sub B6
- a. a call processing and recording system coupled to a telephone network to establish a telephony connection with a telephony device and record an audio communication transmitted over the telephony connection thereby establishing a recorded audio file;
  - b. a server coupled to the call processing and recording system to store the recorded audio file at an independently accessible address; and
